Contents

Preface xi

Contents xiii

Abgrall, R.
Hypersonic calculations by Riemann solvers techniques 1

Agarwal, R.K. and J.E. Deese
Recent advances in computational aerodynamics 8

Baillie, C.F.
A new MCRG calculation of the critical behavior of the 3d Ising model 17

Brandt, A.
Multilevel computations of integral transforms and particle interaction with oscillatory kernels 24

Brickner, R.G., C.F. Baillie and S.L. Johnsson
QCD on the Connection Machine: beyond *LISP 39

Bruhwiler, D.L. and J.R. Cary
Diffusion of trajectories in a simple Hamiltonian system with slow periodic forcing 52

Bruneau, C.-H.
Least-squares computation of hypersonic flows 57

Carr, L.W. and M.S. Chandrasekhara
A study of compressibility effects on dynamic stall of rapidly pitching airfoils 62

Chow, C.Y. and K.H. Kao
Movement of the dividing streamline in unsteady stagnation-point flows 69

Danabasoglu, G., A. Saati and S. Biringen
Three-dimensional simulations of incompressible and compressible flow stability 76

DeGrand, T.A. and R.D. Loft
Wave-function tests for lattice QCD spectroscopy 84

Ding, H.-Q.
Computing quark potential on a parallel supercomputer 92

Dubois, T., F. Jauberteau, M. Marion and R. Temam
Subgrid modelling and the interaction of small and large wavelenghts in turbulent flows 100

Goodrich, J.W., K. Gustafson and K. Halasi
Time-asymptotic flow calculation 107

Gozani, J.
Two-scale expansion of wave propagation in a random medium 117

Gustafson, K. and R. Leben
Computation of dragonfly aerodynamaics 121

Gustafson, K.
Semiconductor device simulation 133

Herbst, B.M., M.J. Ablowitz and E. Ryan
Numerical homoclinic instabilities and the complex modified Korteweg–de Vries equation 137

Hereman, W.
Exact solitary wave solutions of coupled nonlinear evolution equations using MACSYMA 143

Hoyle, J.M., F.T. Smith and J.D.A. Walker
On sublayer eruption and vortex formation 151

Jumper, E.J. and R.J. Hugo
Simple theories of dynamic stall that are helpful in interpreting computational results 158

Kandil, O.A. and H.A. Kandil
Computation of compressible quasi-axisymmetric slender vortex flow and breakdown 164

Feng, K. and M.-z. Qin
Hamiltonian algorithms for Hamiltonian systems and a comparative numerical study 173

Liu, C., Z. Liu and S. McCormick
Multigrid methods for flow transition in a planar channel 188

Macaraeg, M.G.
Investigation of supersonic modes and three-dimensionality in bounded, free shear flows 201

Osswald, G.A., K.N. Ghia and U. Ghia
Simulation of dynamic stall phenomenon using unsteady Navier–Stokes equations 209

Palmer, D.R., T.M. Georges and R.M. Jones
Classical chaos and the sensitivity of the acoustic field to small-scale ocean structure 219

Piomelli, U. and T.A. Zang
Large-eddy simulation of transitional channel flow 224

Sethian, J.A., J.-P. Brunet, A. Greenberg and J.P. Mesirov
A parallel implementation of the random vortex method 231

Shang, E.C. and Y.Y. Wang
Ocean acoustic field simulations for monitoring large-scale ocean structures 238

Sivaloganathan, S.
The use of local mode analysis in the design and comparison of multigrid methods 246

Sobh, N.A. and K. Gustafson
Preconditioned conjugate gradient and finite element methods for massively data-parallel architectures 253

Sugar, R.L.
Numerical simulation of quantum chromodynamics 268

Swendsen, R.H.
Acceleration methods for Monte Carlo computer simulations 281

Vos, J.B. and C.M. Bergman
Chemical equilibrium and non-equilibrium flow simulations using an explicit scheme 289

Winters, K.H.
Bifurcation and stability: a computational approach 299

Wong, Y.S. and H. Jiang
Numerical simulations for transonic aerodynamic flows 310

Xie, G.-q. and Q. Zou
A parallel algorithm for solving the 3D inverse scattering problem 320

Zou, Q. and G.-q. Xie
A parallel computational algorithm for an inverse problem of low frequency 327
